No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                         1 atggcagatgaatcggagaa......aatctttagaccaagcatga 3792

//dow_stage="WetCor: Lambda Uni-ZAP XR, excised phagemid
//down in the greenhouse. Spikes were sprayed at anthesis
grown in the greenhouse. Spikes were sprayed at anthesis
with Fusarium graminearum. Total RNA, and poly(A) RNA were
prepared and pooled from infected spike at 0, 6, 12, 24,
36 and 48 hours after incoulation, a cDNA library was made
, and the cDNA clones were in vivo excised to give
pBluescript phagemids in G. Muchlbauer lab at the
University of Minnesota (Kurger, W.M., Muchlbauer, G.J.,
Pritsch, C., Vance, C.). The cDNA library should contain
genes of both wheat and fungal pathogen origin. Plasmid
DNA preparations and DNA sequencing were performed in the
OD Anderson lab (all other authors)."

The sequence contained an oilgo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NoII site and the oligo-dT track served to identify it as a clone from the normalized atrium at 16.5 dpc library cDNA Library Preparation:

polylinker; Site_1: Not 1; Site_2: ECO RI; The UI-R-C3
library is a subtracted library of a series, ultimately
derived from an placenta, adult lung, brain, liver,
kidney, heart, spleen, ovary, muscle, and 8, 12 and 18-day
embryos, after a series of subtractions to reduce the
representation of CDNAs from which ESTS had already been
generated. The following serially subtracted libraries
were generated in this process: UI-R-C3, UI-R-C2p, UI-R-C1,
// UI-R-C0, UI-R-A1, UI-R-E1. The tag is a string of 3.5
nucleotides present between the Not I site and the
oligo-dr track whichallows identification of the library
of origin of a clone within themixture. The subtracted
library (UI-R-C3) was constructed as follows: PCRampilified
congin of a clone within themixture in a hybridization with
the UI-R-C2p library in the form of single-stranded
circles. The remaining single-stranded circles (subtracted
library) was purified by hydroxypafite column

prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5' and adapter of sequence [5' and adapter of sequence [7' as a constant of the transcript and bamHI sites. Vector: a modified pBluescript KS(+) after bulk excision from Lambda
                                                                                                                                                                                                                                                                                                                                            RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 157-1771 (2000) Konno, H., Fukunishi, Y., Shibata, K., Itoh, M., Carninci, P., Sugahara, Y. and Hayashizaki, Y.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The patent discloses novel polynucleotides encoding Exophiala spinifera fumonish degradative or transport enzymes such as flavin monooxygenses, aldehyde dehydrogenses, permease and p-glycoprotein. A fumonish esterase enzyme with at least one fumonish degradative enzyme is useful for enzyme with at least one fumonish degradative enzyme is useful for detoxifying fumonish or a structurally related mycotoxin present in harvested grain, on application to a plant or to harvested grain of during processing, or to processed grain that is to be used as animal corruption are useful as probes and primers. They can be introduced into microorganisms that multiply on plants to deliver enzymes to introduced via a vector into a microbial host and the transformed host is supplied to the environment, plants or animals for reducing the pathogenicity of a fungus producing fumonish. The genes of the processed and used as a microbial spray. The nucleotide sequences is processed and used as a microbial spray. The nucleotide sequences or or numerabolisms to metabolish spray. The nucleotide sequences or or metabolish mad reasist its toxic effects.

The present DNA sequence is the p-glycoprotein coding sequence Novel polynucleotides encoding Exophiala degradative or transport enzyme which is useful for detoxifying fumonisin or structurally related mycotoxin during processing of grain for human or animal consumption Claim 1b; Page 75-77; 90pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      functional degradative or transport enzymes such as flavin monoorgenase, aldehyde dehydrogenase, permease and p-glycoprotein. A funchisin esterase enzyme with at least one funconisin degradative enzyme is useful for detoxifying funchisin or a structurally related mycocoxin present in harvested grain, on application to a plant or to harvested grain or to processed grain that is to be used as animal or human feed, or as a silage. Nucleotide fragments of the present or human feed, or as a silage. Nucleotide fragments of the present or human feed, or as a silage. Nucleotide fragments of the present or hororizonganisms that multiply on plants to deliver nezymes to potential target crops. The genes encoding the degrading enzymes are introduced via a vector into a microbial host and the transformed host or supplied to the environment, plants or animals for reducing the pathogenicity of a fungus producing fumonisin. The genes of the resulting bacterial is processed and used as a microbial spray. The nucleotide sequences can be used alone or in combination to engineer microbes or other organisms to metabolise fumonisin and resist its toxic effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              patent discloses novel polynucleotides encoding Exophiala spinifera
